
FY25 MercyOne Annual Campaign Future, in Your Hands

Your Gifts Matter ... FY25 Cedar Falls and Waterloo Foundations Campaign Goal

\$1,000,000 – Combined Gift

The **Stryker 1788 minimally invasive surgical camera platform** will bring enhanced technology to the operating rooms. The 1788 platform is Stryker's newest, most sophisticated, and comprehensive surgical visualization solution for use in general surgeries as well as multiple surgical specialties including orthopedics, ear, nose and throat, OB-GYN, podiatry, and urology. Use of the platform will impact 7,500 surgical cases at MercyOne Cedar Falls Medical Center and MercyOne Waterloo Medical Center on average per year.

- The total investment for both medical centers is \$3,267,813.00, which includes a video upgrade for three rooms and one mobile tower in Cedar Falls and eight rooms and two mobile towers in Waterloo.
- With this platform, images will significantly improve from those with the 1488 system which both hospitals are currently using.
- The new surgical camera platform offers a more vibrant image with balanced lighting and better pictures. SPY technology is built into the camera to give surgeons the ability to see beyond the standard wavelength of white light. This will allow identification of critical anatomy, prevent surgical complications, and improve operating room efficiency for open surgeries and minimally invasive cases.

FY24 Cedar Falls and Waterloo Foundations – \$1,426,091 total investment
