

2019 MercyOne Legend Todd Cash, Electrician

The MercyOne Legend Award honors a colleague who lives MercyOne's Mission, Values and Cultural Beliefs. We are happy to present the 2019 MercyOne Legend award to Todd Cash, Electrician in our Engineering department.

Todd has consistently shown his commitment to MercyOne's mission. He has over the last year volunteered for countless assignments beyond his regular work. Todd has been integral in helping with construction projects, both in tie-ins and keeping a watchful eye that contractors follow the MercyOne standards for our building. He also volunteered to drive the MercyOne shuttle during the polar vortex and drove his tractor in from his farm to help with snow removal during one of the harshest storms of the season.

Todd has been an incredible advocate for the hospital. On the Behavioral Health project, he made sure that both code and the MercyOne standards are followed by everyone to give our guests the best experience possible. He has used this knowledge to catch items missed by contractors that could have either delayed the project or been a dissatisfier for our guests. In addition to MercyOne, Todd is a volunteer for 4H and is a rural township trustee.

Even through the most challenging times, Todd has volunteered to come in early and stay late to drive the MercyOne shuttle. His

willingness to do this with very little notice made it possible for colleagues to get into the building with minimal impact during the harshest winter conditions.

During the very last snowstorm of the year, Todd drove his tractor to work to help with snow removal. Learning that one of our snow helpers was stuck at home, he cleared the employee's road, so he could come in to help as well.

Todd has been instrumental in improving our process for generator and UPS testing. He has identified gaps in testing and preventative maintenance and his fixes make sure the organization is always ready for an emergency.

Todd is always exploring ways to improve our electrical distribution system. He was part of the team that worked on the energy center project to make our system more robust and he has been exploring future ideas to add a flywheel UPS to decrease delays from power interruptions.

I have known Todd both personally and professionally for over ten years and he has always shown the highest integrity, not just for patients and colleagues, but to everyone he encounters that is in need.
