

Neurosurgery encompasses surgery of the entire nervous system, expanding well beyond brain and spine surgery. The specialty of neurosurgery is concerned with the diagnosis and surgical treatment of patients with injury to or diseases/disorders of the brain, spinal cord and spinal column, and peripheral nerves. A highly technical specialty, neurosurgery depends upon specialized equipment and highly trained surgeons.

At Mercy's Neurosurgery Clinic, neurosurgeons perform surgeries of the spine and brain using the latest innovations and techniques. Our team offers over 60 years of combined neurosurgical experience. To be seen, patients are referred by their primary care physician or an appropriate medical specialist.
